SERVICE WE PROVIDE

Agile Consulting

Our Agile project management consultancy uses a variety of established processes and effective tools to engineer systems for software development projects that produce timely, successful outcomes. We help IT teams and leadership understand and implement hybrid waterfall and Agile project management techniques with structured assessments to identify the goals, scope, and milestones necessary to create an effective software development plan.

Business Strategy Consulting

As business consultants, we help you develop and understand your company's operational systems, giving you the most control over every aspect of your business process management. Mersi Solutions business strategy consultants help organizations with essential systems engineering and process development. Our project management experts have the tools to instruct analyses such as:

- Defining short- and long-term business growth goals
- Determining quality and customer satisfaction levels
- Examining the causes of persistent management issues
- Assessing how to connect key strategies to corresponding processes
- Developing solutions for sustainable management systems

Project & Process Management

Our systems engineering consultants offer comprehensive process development and Agile project management outlines that can be tailored to the needs of your business. Project governance that stimulates employee engagement and accountability through consistent evaluation yields streamlined management and overall product quality.

Retrospection of each closed project helps identify strengths and weaknesses of existing processes and prevents possible shortcomings of future projects. Practicing vigilance through each step of development with planned Five Scrum ceremonies of Agile, strong project governance and audit processes builds lasting product integrity.

Quality Management

Our systems engineering consultants help you analyze and improve your key business processes in order to maintain quality management standards, while developing a roadmap for receiving ISO quality management and related certifications.

Quality management consulting delivers learning outcomes that drive the leadership's understanding and ability to implement quality management techniques. Mersi Solutions helps businesses define their unique processes, necessary performance standards, and cost of quality control.

Assessing past system failures allows us to determine how to prevent future work process failures and develop conformance and non-conformance requirements. Enforcing performance and quality standards ensures that customer satisfaction does not suffer due to lack of project management consistency.
